Jl Kelurahan Pondok Rajeg, Gg. Ramah RT 02 RW 02, Cibinong Kab. Bogor

Software Developer specializing in enterprise application development using the OutSystems platform. Experienced in collaborating with cross-functional and international development teams to design, build, and maintain business-critical systems. Strong understanding of application architecture, data flow, and API integration, with ongoing hands-on exploration of native web technologies including JavaScript and Node.js.

Work Experience

PT Ifabula Digital Kreasi - Green Lake City Boulevard,
Tangerang, Banten

Jan 2023 - Present

Software Developer

- Bank Syariah Indonesia (BSI)
 - Served as OutSystems Principal Developer in an international team delivering a mortgage financing platform.
 - Integrated multiple external enterprise APIs supporting financing workflows and CRM communication.
 - Refactored legacy modules into a layered architecture aligned with OutSystems best practices.
 - Led recovery and redesign of the Counter Offer financing workflow, resolving logic inconsistencies and coordinating API contracts.
 - Implemented asynchronous processes with OutSystems BPT and robust exception handling for financing approval pipelines.
- Tokio Marine Indonesia
 - Implemented Firebase Cloud Messaging (FCM) integration within an OutSystems mobile insurance app for real-time push notifications.
 - Developed multilingual mobile interface with dynamic switching between Indonesian and English.
 - Built features for a micro-insurance platform supporting SME partners across mobile and PWA onboarding flows.
 - Implemented secure URL tokenization and encryption for WhatsApp-distributed quotation links redirecting to PWA workflows.
 - Built asynchronous background processes using timers to automate reward notifications and user engagement messaging.
- FIF Group
 - Developed a mobile stock-opname application from scratch using OutSystems mobile framework for internal inventory tracking.
 - Implemented token-based API authentication and backend integration for secure inventory synchronization.
 - Designed SQL-based data processing logic for item filtering, stock validation, and reporting.
 - Implemented offline-first mobile capability with automatic sync upon network reconnection.
 - Collaborated with cross-vendor engineering teams to coordinate API usage and database access.
- NFC Flazz Integration Research
 - Engineered a Cordova-compatible mobile plugin enabling BCA Flazz NFC functionality within an OutSystems hybrid mobile app.
 - Translated native vendor components using JNI (C to Java integration) to enable compatibility with Android-based applications.
 - Converted vendor-provided ARM native libraries and header files into a functional Cordova plugin architecture.
 - Successfully validated Android NFC card interaction, enabling the application to read Flazz cards through the integrated plugin.

Tsuki Software House - Bandung, Jawa Barat

Nov 2022 - Dec 2022

Lead Front End Developer

- Front-end developer, collaborating directly with UI/UX designer and backend developer.
- Built the Sura-Link interface using React.js, implementing dynamic form handling and document preview features.
- System successfully automated a document creation workflow that was previously done manually.
- Built and deployed Percik's company profile website using React.js, ensuring full responsiveness across devices.

PT Rama Karya Digma - Jl. Dewi Sartika No.327D Jakarta
Timur 13630

Jul 2021 - Aug 2021

Website Developer Intern

- Developed and deployed a responsive company profile website presenting the organization's vision, mission, product offerings, and contact information.
- Built the website interface using HTML, CSS, and Bootstrap, implementing responsive layouts to ensure accessibility across desktop and mobile devices.
- Translated company branding and content requirements into a structured and user-friendly web interface, improving clarity of information for potential clients.
- Configured domain registration and hosting deployment, enabling the website to be publicly accessible and maintained in a live production environment.

PT. Telkom Indonesia, Tbk. Wilayah Telkom Bogor - Bogor,
West Java, Indonesia

Jul 2020 - Aug 2020

CCNA Intern

- Developed a Telegram Bot-based customer support automation system for IndiHome services, integrated with QR codes installed on customer routers to simplify complaint reporting.
- Designed a workflow that redirects customers to a structured Google Form for submitting internet service complaints directly to the customer service team.
- Implemented bot interaction logic connecting router-based QR access points with digital reporting channels, enabling faster issue submission for internet users.

Education Level

Universitas Telkom - Bandung, Indonesia
Bachelor of Telecommunication Engineering

Jul 2018 - Sep 2022

Organisational Experience

Himpunan Mahasiswa Teknik Telekomunikasi - Bandung, West Java, Indonesia
Head of Departement Media Development

May 2021 - May 2022

- Designing work programs for the next period of the Media Development Department.
- Responsible for the entire distribution of information within the telecommunications engineering student.
- Responsible for all information dissemination media such as the organization's social media and website.
- Participate in the development of an organization application project called the DigiTelco, as a Front-end Developer

Skills, Achievements & Other Experience

- **Certification** (2026): Agentic AI Specialization Outsystems
- **Certification** (2025): Dicoding Certificate. Belajar Dasar Pemrograman Web
- **Projects** (2025): Sura-Link. Developed the frontend interface of a document generation system using React.js to automate the creation of official documents.
- **Certification** (2025): Associate Reactive Developer. The Associate Developer exam focuses on the fundamentals of OutSystems 11 web and mobile application development.
- **Projects** (2022): This Project is about voting application that built with React Native, allows users to cast their votes for the available options provided by the admin.
- **Modules Taken** (2021): Data Visualization and Data Analysis Using Python, held by Forum Mahasiswa APIC with DQLAB
- **Webinars Attended** (2020): Attending a webinar held by Transtel Research Divison Telkom University on the basics of the Python programming language for data science.
- **Projects** (2023): Developed and deployed a full-stack warehouse web application. Developed RESTful APIs to manage data flow between the server and the client, Integrated backend APIs with the frontend.
- **Projects** (2023): As a Front-end Developer, contributed to an IoT project monitoring plant nutrition conditions using React Native for the interface and Firebase as the Backend as a Service.
- **Projects** (2022): Creating an Internet of Things (IoT) system utilizes a NodeMCU ESP32 device equipped with sensors.
- **Projects** (2021): This application is a form of my collaboration with telecommunications engineering student organizations, where this app is a news app is mainly about telecommunications engineering
